Harvesting

Planting

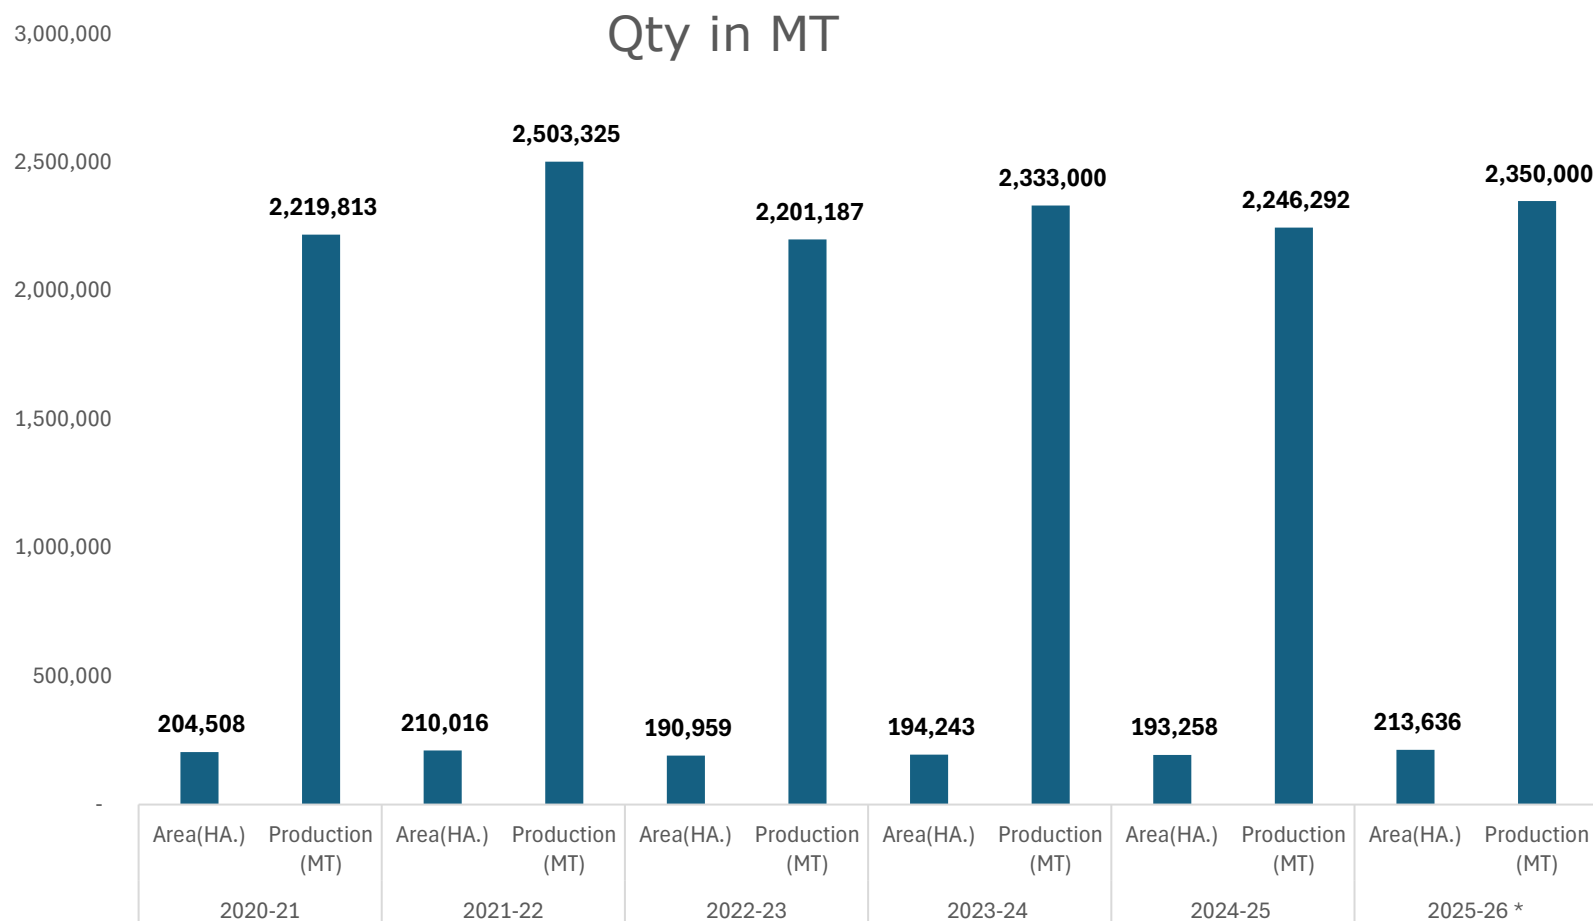

World production is around 5 million MT

India

Ginger Production - India

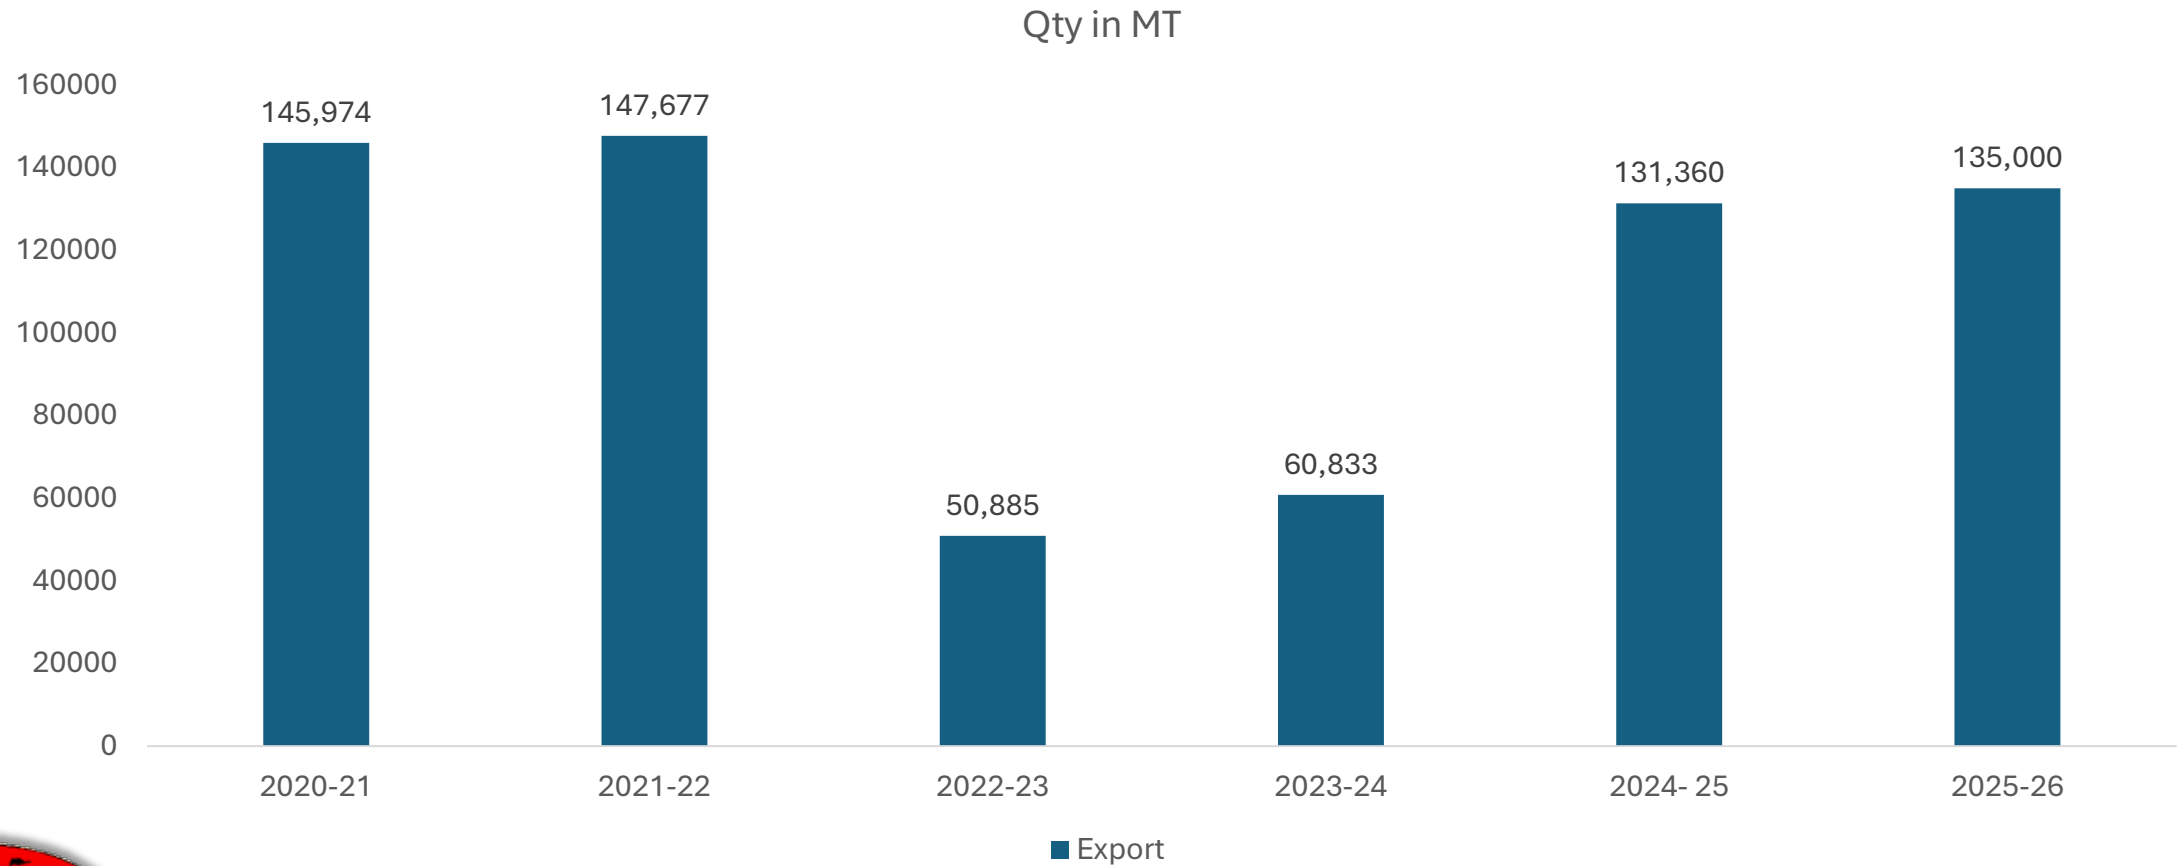

Outlook- India

Fundamentals

- Strong initial outlook on higher sowing; later disrupted by weather and disease
- Harvesting started and good demand for fresh ginger due to winter season
- Excess rainfall led to production loss estimated at 20–25%
- Karnataka crop losses driving supply tightness; Maharashtra offers limited support
- Northeast emerging for EU-grade ginger, but volumes remain limited
- Adverse harvest weather impacting drying and dry ginger availability
- Carry-forward stocks remain low; dry ginger supply structurally tight
- Firm prices expected, supported by strong fresh ginger and value-added demand
